

Case Study – QA Position for Games Production Team

Introduction

This case study is designed to evaluate your skills in quality assurance within an iGaming context. The goal is to see how you approach real testing problems — both conceptually and practically.

You may use any tools, test frameworks, or programming languages you are familiar with. Please describe your approach and reasoning in your answers. It is not important that everything is perfect — we are paying attention to your thought process, creativity, and quality mindset.

Estimated time: approx. 3 - 4 hours

Submission format: GitHub repository

Task 1 – Scratchcard

Background

The game "Schatzsuche" ("Treasure Hunt") is a digital scratchcard with various symbols and prizes.

The game rules and prize plan are below and/or in an attached PDF file.

- There are multiple winning classes (WC), e.g., WC1 = €0, WC2 = €4, etc.
- Symbols such as WINNER, DOPPLER, and FREE TICKET influence the game outcome.
- There are ticket-level constraints, e.g., maximum wins per ticket, symbol placement rules, etc.

Goal

Define a test strategy and derive concrete test cases from it to verify the game mechanics.

Requirements

- Document the strategy and test cases, e.g., in Excel or a test management tool of your choice.

Prize Plan

The scratchcard series comprises 1,830,000 tickets priced at €2 each and additionally includes 183,000 free tickets, with odds of 1:915,000 for the top prize. Odds of winning any prize according to the prize plan for this series are 1:7.12. You risk losing your stake.

Notes:

1. Most of the tickets are non-winning tickets. Assume there is a winning class 0 for non-winning tickets.
2. Free tickets (FREILOS) can occur in any winning class.

Number of Wins	Ticket Prize*
2 x – winning class 10	€15,000
10 x – winning class 9	€1,000
1,069 x – winning class 8	€100
1,500 x – winning class 7	€50
1,300 x – winning class 6	€40
500 x – winning class 5	€25
4,800 x – winning class 4	€20

Number of Wins	Ticket Prize*
54,000 x – winning class 3	€10
32,900 x – winning class 2	€8
161,100 x – winning class 1	€4

Game Rules

Symbols:

- Scratch off the symbol and chance fields.
- If you find a **WINNER** symbol (GEWINNER), the adjacent amount is won, or you receive a free ticket.
- The **DOPPLER** symbol doubles the adjacent amount.

General Rules

1. A win of €15,000 must appear on every ticket, except on tickets with six (6) individual wins.
2. The "FREE TICKET" (FREILOS) symbol appears exclusively on tickets with a free-ticket win.
3. All image symbols and euro amounts should be distributed roughly evenly across winning and non-winning tickets, unless other restrictions, game mechanics, or the prize structure require otherwise.
4. Symbols on non-winning tickets must not be linked to a specific prize value.
5. A ticket can contain up to six (6) individual wins.
6. Ticket configurations must not repeat on consecutive tickets within a ticket book.
7. Each prize amount may appear only once per ticket, unless multiple wins make repetition necessary.
8. Within a ticket book, a maximum of nine (9) consecutive non-winning tickets may occur. (Free tickets count as a winning ticket in this context.)

Winning Tickets

9. On winning tickets where a prize is not won via the DOPPLER symbol, a "FREE TICKET" symbol appears next to the prize amount.
10. If a ticket wins with the DOPPLER symbol, the prize amount is doubled according to the prize structure.
11. The "FREE TICKET" symbol may only appear together with the WINNER symbol.

Non-Winning Tickets

12. On non-winning tickets, all game symbols are unique — there are no duplicates.
13. The WINNER symbol must not appear on non-winning tickets.
14. The DOPPLER symbol must not appear on non-winning tickets.
15. The "FREE TICKET" symbol must not appear on non-winning tickets.

WINNING SYMBOLS

NON-WINNING SYMBOLS

Task 2 – Slot

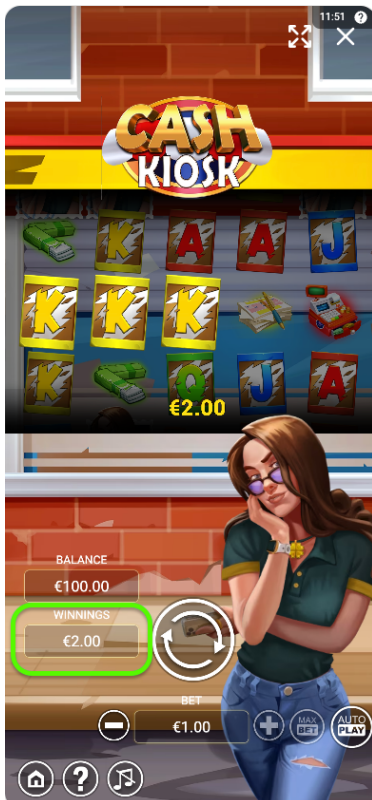

Background

The slot game "Cash Kiosk"

- **Target page:** <https://zig.services/games/gazicashkiosk>
- **Entry point:** Open the game and start the game by clicking on the “play game” button, bottom right.

Goal

Design and implement tests that open and start the game, play until a win occurs, and verify that the winnings shown in the game's win display match the winnings returned by the API call.

Requirements

- Use mobile device emulation — the testing approach is "mobile first".
- Manual, automated, or combined tests may be submitted.
- Feel free to use tools and testing approaches of your choice.
